PROJECTS

What-to-Watch | Deployed: https://hayni100.github.io/Movie-Recs/
- *Allows users to find a movie fitting multiple genres. Love horror, comedy, and also animation? Our app suggests watching "The House" which received 7.1/10 stars on IMDB.*
- Role in project: Concept Ideation, API fetch requests, movie data parsing and rendering.
- Technologies Used: Git branching workflow, agile development, client-side web app.
- Code repository: https://github.com/hayni100/Movie-Recs

Mail-Me-Seeds | https://mail-me-seeds.herokuapp.com/
- *Allows gardeners to share expensive plant seeds with other gardeners instead of letting leftovers expire. Does any one person really need to plant 50 kale plants?*
- Role in project: Concept Ideation, Models, Views.
- Technologies Used: Node.js and Express.js; Handlebars.js. MySQL & Sequelize, Express-session
- Code repository: https://github.com/TheBluWiz/mail-me-seeds

Ro-sham-boTS | https://beat-the-bots.herokuapp.com/
- *A full-stack team-building web app where users communicate in real time to suss out the predictable play habits of robot opponents who love mocking human beings.*
- Role in project: Ideation, mockup design, login/signup utils, schemas, typeDefs, Resolvers.
- Technologies Used: MongoDB, GraphQL, Express.js and Node.js, React, JWT-based user authentication.
- Code repository: https://github.com/katbakr/beat-the-bots
